

AllCells Massachusetts LeukoLab Facility Celebrates Grand Opening Expansion to Support Rapid Industry Growth

Subtitle: One of Many AllCells Strategic Investments to Stay Ahead of the Market Demand.

Alameda, CA. – November 18, 2021 – [AllCells](#), the industry leader in the procurement and customization of human-derived hematological tissues and services, has announced an expansion of its FDA-registered and IRB-approved [LeukoLab](#) collection facility in Quincy, Massachusetts. LeukoLab's expansion will increase AllCells' production capacity and footprint in response to growing industry requirements for cellular materials. The 5,700 square foot expansion will also significantly increase the collection of GMP-compliant and research-use products.

AllCells provides clients with quality products, while LeukoLab provides recallable donors with the best experience throughout the donation process. AllCells' Donor Management, Recruitment & Retention Services are operated by LeukoLab, a division owned by AllCells. In addition to a focus on a quality donor pool, LeukoLab also developed an in-house proprietary database known as DMS (Donor Management System). DMS provides AllCells clients with a targeted approach on specific donor requirements to get suitable donors for every project - every time.

"In the beginning, as the Founder of AllCells, I worked countless hours developing this commercial company and was also a donor by donating my bone marrow as the first product of AllCells. My personal experience as a donor is why our LeukoLab collection facilities focus on the donor experience. Today, we provide a complete solution to our customers from three strategic locations, so they can focus on their breakthrough technology," said Dr. Jay Tong, Founder, and CEO.

The LeukoLab expansion is one of many investments AllCells has made to support the future growth of the cell and gene therapy market by providing consistent, high-quality products backed by exceptional customer success and donor management services. In addition to the expansion in Massachusetts, AllCells' FDA-registered and IRB-approved donor collection facilities are strategically located in California and Texas.

Lauren Greene, Director of Donor Management, explains, "Here at AllCells, we have a donor pool that is really diverse, but our priority is a quality donor. We look for a donor who is reliable and recallable because we know that is what's most important for our customers."

One LeukoLab donor wrote a 5-star Google review describing their recent experience, "I've donated twice at LeukoLab up to this point, and both times the experience has been easy, straightforward, and really pleasant! All of the people at LeukoLab are super friendly, and they make sure you feel as comfortable as possible for the entirety of the donation. Highly recommend."

About AllCells

Founded in 1998, AllCells is the global leader in the procurement and customization of biologically relevant research, GMP-compliant products and donor management services – which support a diverse range of life science and regenerative medicine applications. Our donor facilities operated by LeukoLab are FDA-registered, IRB-approved, AABB-compliant, and strategically located across the US – providing access to healthy, recallable donors with diverse and rare demographics. Our adjacently located processing facilities have GMP capabilities, affording us the responsiveness to handle custom requests and enable immediate processing and cryopreservation for unparalleled quality and deliverability. Backed by years of scientific and regulatory expertise, AllCells operates under a robust quality framework and is committed to providing flexible and scalable solutions necessary to meet the program-specific requirements and timelines, from inception to commercialization. *AllCells – Quality Cells for Quality Science*
